ENCLOSURES: Annotated photograph of Moravska Ostrava Petroleum Refinery.

REQUIREMENT RR/HTA/E/R105/56: Determine the location, numbers, and dimensions of the various types of equipment existing in the Moravska Ostrava Petroleum Refinery, Ostrava, Czechoslovakia. Report any evidence of new construction or expansion.

## REMARKS:

The Moravska Ostrava Petroleum Refinery is located in the city of Ostrava, Czechoslovakia, near the Czech-Polish border. It reportedly produces light and heavy gasoline, diesel fuel, kerosene, and lubricating oils.

The refinery is situated in the northwest section of the city, one and one-half miles SSW of the confluence of the Oder and Ostravice rivers. and is bounded on the northwest by a marshalling yard and the Bohumin Railroad. The plant area measures approximately 1,960 feet by 880 feet. Transportation for both crude and refined products is by rail.

A comparison of photography with that of indicates that several buildings have been removed from the northeast section of the plant and replaced by a new power house, two new cooling towers, and a probable distillation unit. Two cooling towers previously located adjacent to this area have been removed. The major components of the refinery are identified and described on the accompanying annotated photograph.
